

Spa Quick Set-Up Guide

Note: All Spas are slightly different in configuration and this is for guidance only, but the principals remain the same. Please refer to your Control Panel Manual and Chemical Guide attached for detailed advice.

Your Complete SPA Owners Manual Available online at <https://www.combinedshipping.co.uk/Article-SPA-Owners-Manual>

1. Remove Side Panels

Use **hand screw driver (to avoid threading screws)** to remove 4 screws for the panels directly under the control panel.

2. Check Pipe Unions

These can become dislodged during transit, turn them slightly to ensure tight fitting to avoid leaks. Check them again once filled with water.

3. Connect Electrics (under control panel)

Ensure you use a fully qualified electrician. If you do not install your electrics correctly, it will invalidate your warranty. The 13amp Plug & Play versions come with cable and plug, however, it is recommended a RCD protected socket is used, other models do not come with cable. **Note: The isolator or socket must be at least 2 metres away from the Spa.**

Control Panel

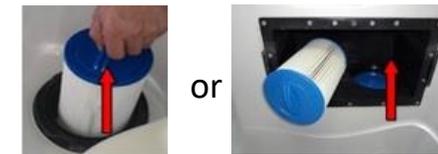

4. Fill Your Spa

Fill your Spa using a hose pipe through the filter housing (to avoid airlocks). This can take several hours. Ensure you fill 4" to 6" below top edge of spa, all jets need to be covered with water. **Check pipe unions again. Note: Make sure cellophane is removed from filter, which is situated in the housing.**

Filter Housing

5. Switch Power On to Spa

Control system will go through a priming cycle for 5 minutes, pre-set temperature is normally 37 degrees. Refer to manual for full set-up guide. **Your Spa will take approx. 24 hours to heat up (approx. heats up 1 degree per hour).**

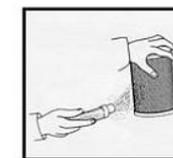

6. Add Chemicals

Once Spa is over 20 degrees, add your chemicals. Refer to manual for full set-up guide.

Important – Keep Filters Clean

An unclean filter will cause damage to the heater and pumps. For best results we recommend you jet wash them once a month, depending on usage.

SPA Maintenance Calendar

Weekly

• Check Water Chemistry

Fortnightly

• Clean Filters
no more than 3 weeks

Every 3 Months

• Drain & Clean Spa
no more than 4 months

Annually

• Full Service
